actions of FPT University students have taken actions under SDG 12 – Responsible Consumption and Production.

FPT University has enacted a policy aimed at reducing plastic waste. "In order to improve recycling activities, FPT University will take part in A GARBAGE SORTING AND RECYCLING PROGRAM. At all of our campuses, we're working toward our aim of minimizing the usage of disposable tissues and plastic products."

For FPT University's outside food vendors, their contracts list out the requirements for food quality, hygiene, safety, and affordability. According to contract **No. 49-2020/TTHT/ĐH FPT-ANND**, they must meet all 12 standards listed in requirement Seven according to HACCP/ISO 22000:2018 principles for **FOOD SAFETY, QUALITY MANAGEMENT, VARIETY, ETHICS, AND PRICE**.

Furthermore, these vendors must manage waste in order to **COMPLY WITH ENVIRONMENTAL STANDARDS**.

The community participation indicators for SDG 12 of FPT University staff and students have revealed that the university **HIGHLY EMPHASIZES RESPONSIBLE CONSUMPTION AND PRODUCTION AWARENESS**.

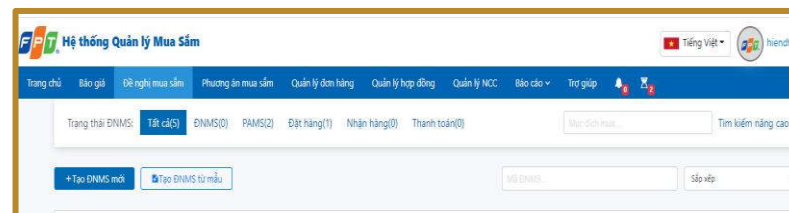

Plastic and hazardous waste is a global issue, especially in Vietnam. Over the years, despite many efforts to overcome this issue in all FPT University campuses, we understand that this is a city and national concern. Even if we **CORRECTLY SEPARATE WASTE**, when connected to the city's system that is not up to standard, the results achieved will not be as expected. There is a need for stronger and more effective policies, measures, and tools to implement the waste problem at the national level, and the closer cooperation of many domestic and international organizations.

FPT University has applied strict and unified **REGULATIONS** from the FPT Corporation for purchasing supplies and equipment since 2006, which were upgraded in 2020, ensuring the selection of high-quality vendors.

In particular, the university's management system for all activities is **DIGITAL TRANSFORMATION**.

Many FPTU students are interested in competing in **REGIONAL AND INTERNATIONAL COMPETITIONS ON THE TOPIC OF SUSTAINABLE DEVELOPMENT**. These activities contribute to a greater understanding of pollution and its environmental impacts.

FPTU conducts strong Digital Transformation. Even the internal procurement process is fully digitized according to Decision No. 01- QT/MHDC/FPT .

There is **A VARIETY OF PLANTS AND TREES** on the FPT University campuses such as shade trees (pines, Da Lat purple phoenixes), dwarf trees covering building surfaces (sunlight flowers), flowers (rose,...), grass, trees in the lake (lotus)

On campus, waste is organized and **CLASSIFIED AS LANDFILL WASTE, RECYCLABLE WASTE, AND FOOD WASTE**. Because the waste system in many localities of Vietnam is still not up to the standard for sorting and recycling, our efforts in connecting to this general system for waste transportation are very limited.

Waste sorting area in campus

During the pandemic, since the end of 2019, the bar for **HYGIENE REQUIREMENTS** has been raised in the entire university. As of November 2019, we have added strict regulations on hygiene during the epidemic season.

Hygiene rules, which are called the **"5K RULE"** are maintained everywhere on the campuses :

"K" based on Vietnamese letters, mean's

1. Face mask ; 2. Disinfection, 3. Distance; 4. No gathering; 5. Health declaration.
