actions of lecturers and employees at FPT University have supported the goal of "Climate Action" - SDG 13

Green design and potted plants over the building's surface

FPTU has an infamous green and beautiful campus among Vietnamese universities. The campus has become a place for students to experience plant diversity and increase their love for the university. Moreover, the green designs provide a natural cooling system that reduces the amount of electricity needed for air conditioners.

Promoting electric cars at FPTU

Because of the large-size campuses, the university has equipped students and employees electric cars to move around. All electric cars are in the lobby of the main buildings. Upon the request, we can use electric vehicles to commute across the campus or visit other buildings.

Renewable sources

26.4 percent (equivalent to 2,123,261 KWh) of FPTU's total energy purchased in 2022 came from **renewable sources** such as solar and wind energy (compounded at the national rate).
